

Infracore EndGuard: Centralized Endpoint Data Protection and Management

Safeguard Your Enterprise Data Everywhere It Lives

Infracore EndGuard™ is a centrally-managed, cloud backup solution that protects corporate data where it lives – on laptops, tablets and smartphones. Secure backup, best-in-class data loss prevention, geotracking, remote wipe and heterogeneous restore capabilities are combined in a single, unified dashboard to simplify management for IT, improve business productivity and reduce security risk.

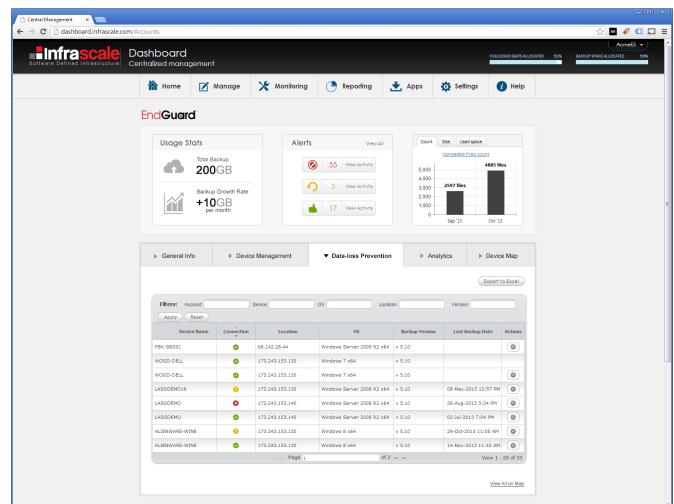

“Eighty percent (of IT security practitioners) say laptops and other mobile data bearing devices pose a significant security risk to their organization's networks or enterprise systems because they are not secure.”

-Ponemon Institute, 2013 State of the Endpoint Report

EndGuard Enterprise Endpoint Data Management and Protection

Data Protection

- Backup across multiple OS platforms-- Windows, Mac, iOS, Android and Windows Phone--ensures support for device diversity.
- Military grade, three-tiered encryption process provides the highest level of data protection.
- Remote wipe, heterogeneous data restore, and geo-tracking provide best-in class data loss prevention.
- Backup to public cloud, private cloud or hybrid; you choose the configuration that's best for your business.

Simplify Management

- User-transparent backup and monitoring allows IT to protect and manage devices without interrupting or intruding on personal usage.
- Intuitive management dashboard and mobile app allows IT to deploy changes, report, and monitor endpoint backup from anywhere in the world.
- Allows for mass deployment, policy management, data capture frequency controls, task delegation and self-service restore.
- Robust reporting tools and analytics provide easy access to data usage and trends. Centralized real-time search enables administrators to locate and retrieve any backed-up file on any device and analyze usage trends.

Scalability & Performance

- Near continuous data protection designed to provide transparent and efficient backup.
- WAN optimization capabilities including deduplication, incremental snapshots, block-level binary compression, dynamic threading for bandwidth management and CPU throttling dramatically reduce storage, network and compute resources needed for efficient backups, enabling more devices to be protected faster and at lower costs.

EndGuard for MSPs and VARs

IT Service providers need to package and deliver solutions that are cost efficient for customers, easy to manage for administrators and profitable for MSPs. With over 1000 MSP and VAR partners providing best-in class services on Infracore's global storage and data protection platform, Infracore is a proven and strategic technology partner for IT service providers and MSPs.
