

Data Protection That Meets The Needs of a Distributed Workforce

Case Study - Athena Health Care Systems

Background

Athena Health Care Systems is a Connecticut-based management company that provides quality health services and manages nursing facilities located in Connecticut, Massachusetts and Rhode Island. With over 6,000 employees their managed facilities offer short-term rehabilitation, long-term, respite, and hospice care.

“With Infrascale, you get an easy to use backup solution at an affordable price.”

Angel Andrews,
IT Manager at Athena HealthCare Systems

PROFILE

Industry: Healthcare services & management

Company Size: Over 6,000 employees

Location: Connecticut

CHALLENGES

- Finding reliable data protection that's easy to use
- Protecting a distributed workforce
- HIPAA compliant

Business Challenge

Finding Reliable Data Protection That's Easy to Use

A top priority for Athena Health Care systems included finding a backup solution that was reliable, scalable, and easy to use. Key requirements included protecting physical servers and a distributed workforce. One of Athena's Health Care System's acquisitions had been using Infracale's Data Protection cloud software as their direct to cloud backup solution and after a trial, they were impressed with how easy the Data Protection cloud was to manage and how reliable it was during restores. They decided to deploy it across the entire company and have been using the data protection cloud for the past 4 years.

How Athena Health Care Systems Uses Infracale

Athena Health Care Systems uses the Data Protection Cloud (DPC) software to protect files on their physical servers and their mobile endpoints, including desktops and laptops. Angel Andrews, IT Manager at Athena HealthCare Systems said, "The length of backups is unprecedented. What I love is that even if you make changes to a file, you can granularly search and retrieve the original file. No other solution offers that." He added, "Whenever I've had to do a restore, it's been 100% reliable."

For Angel Andrews, ease of use is a top priority for any solution his department uses and the Data Protection Cloud continues to deliver the "set it and forget it" promise. Complimenting DPC's powerful feature set is its affordability, which fits in nicely with Athena's budget.

Success and Plans for the Future

The Data Protection Cloud has been a perfect direct to cloud backup solution for Athena HealthCare System's needs, which is why they deployed it across their entire company and companies they've acquired. Angel added, "With Infracale, you get an easy to use backup solution at an affordable price."

SOLUTION

Deployed Infracale's Data Protection Cloud Software on Windows physical servers, desktops, and laptops.

RESULTS

- Fast and reliable backup and recovery
- Easy to deploy and manage
- Meets all compliance requirements

The length of backups is unprecedented. What I love is that even if you make changes to a file, you can granularly search and retrieve the original file. No other solution offers that."
