Infrascale Cloud Backup is an enterprise-grade direct-to-cloud backup solution that protects servers, desktops, laptops, tablets, and smartphones, all in one solution.

Protect All of Your Data
With so many untethered laptops and mobile devices, IT is challenged with protecting distributed data. Infrascale Cloud Backup supports the most popular operating systems and protects servers, workstations, laptop fleets, and mobile devices.

Unlimited Version History
While some providers won’t let you access every previously saved iteration of your files (e.g., only versions from the past 15 days), Infrascale Cloud Backup provides an unlimited version history without such restrictions.

Anomaly (Ransomware) Detection
Infrascale Cloud Backup includes Anomaly Detection that proactively notifies you when the changed file count surpasses a specified threshold. These early warnings can limit the amount the damage inflicted by ransomware while also pinpointing the time of infection.

Snowden-Proof Encryption
We encrypt files with AES 256 bit encryption before being transferred over a secure SSL (AES 256 bit) to one of our top-tier data centers. We also encrypt your data at rest within our data centers. For added security and privacy, we offer UltrasafeMAX, an exclusive, double blind encryption method that gives you, and only you, access to decrypt data.

Trust in the Cloud
By backing up your information to the cloud you can easily access, manage, and recover your data from any device via our online web portal—log in from any browser, even your tablet or smartphone.

Road Warriors & Branch Offices
For many IT organizations, protecting mobile devices and laptops for remote users and branch offices is a major headache. With Infrascale Cloud Backup, you can protect all of your data -- no matter where it resides.
How It Works

Mass Deployment
You can mass deploy backup agents to branch office laptops, desktops, and mobile devices. You can even integrate your deployment with Active Directory to automatically create accounts.

Setup Monitoring Alerts
Create alerts to show errors, warnings, successes, missed backups, anomalies, or any combination of these. Proactive alerts will save you time and ensure all of your organization’s data and devices are protected.

Test a Recovery
With Infrascale Cloud Backup, you can recover files and folders, even entire images, in seconds. With unlimited testing, you can even run as many test recoveries as you’d like.

Centralized dashboard simplifies data protection across offices and devices.

Protect mixed environments, including physical and virtualized data and 100+ operating systems (Windows & Mac).

Military-grade encryption: encryption in transit, encryption at rest.
Infrascale Cloud Backup has been built to meet the needs of businesses and organizations that handle sensitive information. Proactive regulatory compliance capabilities ensure that you stay ahead of potential data risks.

Cloud Flexibility

With Infrascale Cloud Backup, you choose where to store your data: our cloud, your cloud, or any cloud. If you choose to host your data with Infrascale, you can select from one of our 15 global, Tier III and Tier IV, data centers.
Infrascale provides the most powerful disaster recovery and cloud backup solutions in the world. Founded in 2011, the company aims to give every organization the ability to recover from a disaster — quickly, easily and affordably. Combining intelligent software with the power of the cloud, Infrascale cracks the disaster recovery cost barrier by removing the complexity and cost of standby infrastructure to restore operations in minutes with a push of a button. Infrascale equips businesses with the confidence to handle the unexpected by providing less downtime, greater security, and always-on availability.

Optional Services

Exchange Granular Recovery
For many organizations, email is the number one mission-critical application. That’s why we offer Granular Exchange Recovery that lets you restore an entire mailstore, an individual mailbox, or individual emails, attachments or calendar objects directly back to your live Exchange store.

Bare Metal Backup & Recovery
Beyond files and folders, Infrascale offers a volume-based Bare Metal Backup & Recovery option which lets you recover a full working machine or VM from scratch after a catastrophic failure. Typically, the process involves reinstalling the operating system and software applications and then, if possible, restoring data and settings.

Supported Systems

Windows® XP*, Vista (SP2) and up
Windows Server® 2003*, 2008 (SP2) and up
Microsoft SQL Server® 2008 and up
Microsoft Exchange Server® 2010, 2013

Mac
OS X 10.8 and up

Linux
volumes supported by network-mapping to a PC or Mac

Android
2.2 and up

iOS
7.0 and up

* Some current features are not supported with this OS.
