

SO BEGINS THE FAILOVER REVOLUTION

Disaster Recovery for Every Business

 **InfraScale**™

Flexible Failover Deployment (Site to Site)

Data Protection Appliance (DPA) is an enterprise-grade disaster recovery solution that recovers systems and applications. DPA fits into any environment and meets most deployment requirements.

Step 1

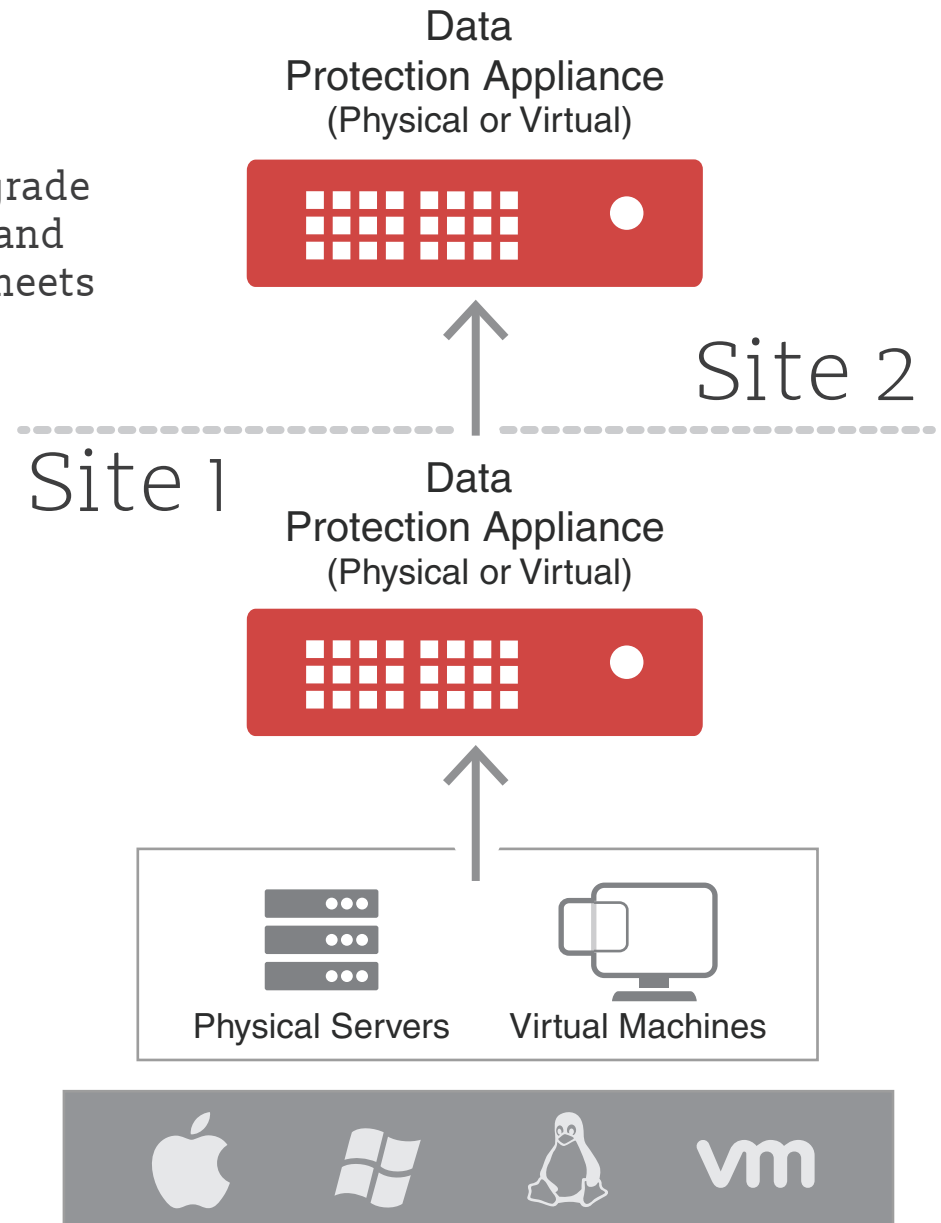

Deploy DPA
(physical or virtual)

Step 2

Install agents or
choose hypervisor host.
Perform initial backup.

Step 3

Should a server outage or
natural disaster occur, you
can boot from the appliance.

Flexible Failover Deployment (Infrascale Cloud)

Cloud Failover Appliance (CFA) is an enterprise-grade disaster recovery solution that recovers systems and applications. CFA fits into any environment and meets most deployment requirements.

Step 1

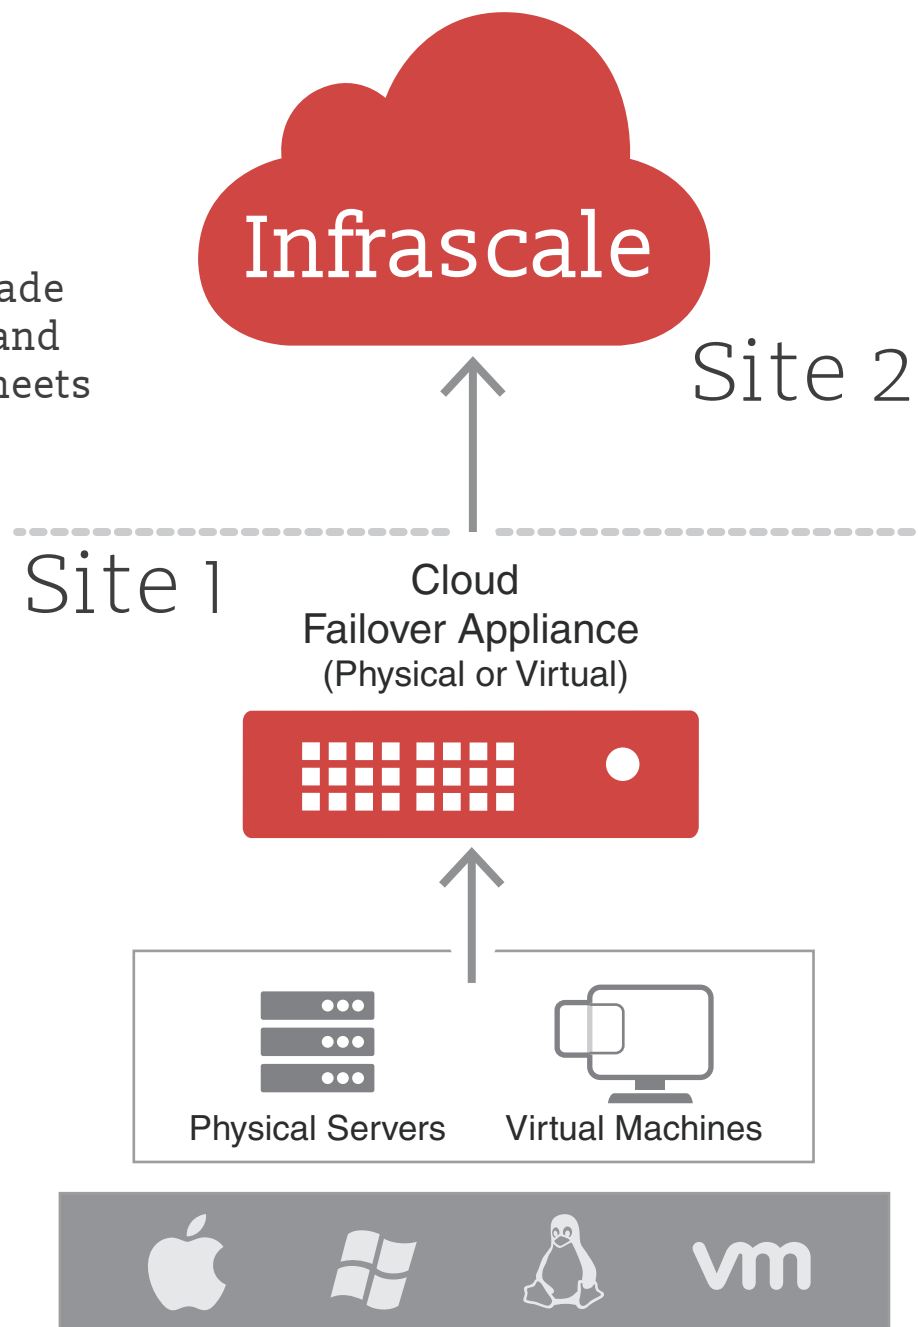

Deploy CFA
(physical or virtual)

Step 2

Install agents or
choose hypervisor host.
Perform initial backup.

Step 3

Should a server outage or
natural disaster occur, you
can boot from the appliance
or cloud.
