

WHAT CAN INFRASCALE DO FOR YOU

Finally, Simple and Affordable DR for Every Company

Push-Button Failover

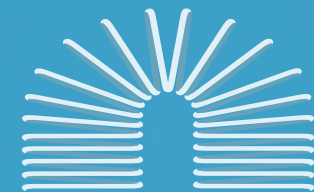

Imagine rapid failover of your entire business (systems and network) to a second site for the cost of backup. That's Infrascale's Disaster Recovery as a Service. We minimize the risk of data and operational downtime so that big \$700,000 per hour downtime stat that keeps you up at night never impacts your business.

Reduce DR Costs

To make DR affordable for every business, we built a DR solution that doesn't require:

- A large upfront investment for a 2nd standby failover site
- Additional IT resources to deploy, test, and manage
- RPO/RTO tradeoffs

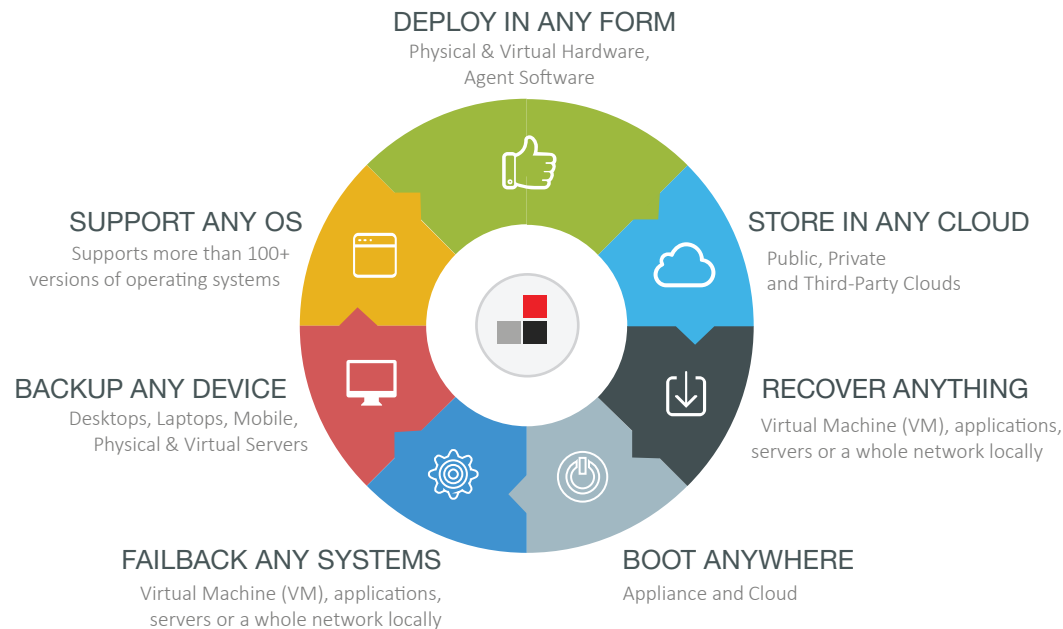

Flexible

Complimenting Infrascale's powerful failover capabilities, is its ability to fit into any environment and meet any deployment requirement.

- Deploy in Physical and Virtual
- Protect any OS and Device
- Store in Any Cloud

TRANSFORM WITHOUT DISRUPTION

Anatomy of Infracore DRaaS

HOW

Cloud Failover Appliance (CFA) + DR Software + Cloud Services

STEP 01

Deploy CFA as a physical or virtual appliance and protect physical and virtual environments. CFA Includes:

- Intelligent DR software
- WAN acceleration
- Block level deduplication
- Military-grade security

STEP 02

Protect more data on a smaller appliance with software that intelligently spills data into the cloud based on rules you set, so you don't have to scale DR with additional hardware.

STEP 03

When server failures or natural disasters occur, push a button and failover to a second site (from seconds to minutes). You can boot from the appliance or the cloud.
